

December 9, 1948.

Dr. Hans Neurath,  
Dept. Biochemistry,  
Duke University School of Medicine,  
Durham, No. Carolina.

Dear Dr. Neurath,

Thank you for your reprint of the paper "Kinetics ... of carboxypeptidase activity." This formulation is very useful to the analysis of the kinetics and inhibition of *E. coli* galactosidase which we are studying. I hope you can do me the favor of sending me your future papers on this problem.

I am writing to call your attention to a small typographical error which conceivably might still have been missed. P. 894, line just under equation (3) you have "where  $k'$  is proportional only to the concentration of the complex". If I am not mistaken you might mean " $v$ " rather than  $k'$ , although I doubt whether this can be confusing except to someone outside this specialty.

Yours sincerely,

Joshua Lederberg  
Assistant Professor of Genetics.
